

Environmental | Safety | Social

Forward thinking organizations are realizing that EH&S performance indicators are analogous to financial performance indicators –both provide measurable, and true health of the corporation. Although, critical EH&S data are major components of sustainability and corporate responsibility reporting, without a common database platform, facilities report data in hardcopies or via spreadsheets. Data validation, normalization and aggregation process is increasingly becoming a time consuming task. Additionally, lack of an reporting in consistent units (e.g., Tons vs. Kilograms) is common, specifically for multinational organizations, which adds additional manual data conversion steps. In summary, without a common platform for corporate and facility EH&S teams, the EH&S metrics management could be an extremely inefficient and error-prone process.

Our EH&S Metrics solution is industry's most comprehensive solution designed to allow organizations to establish a 360 degree performance management system to streamline every aspect of collecting, verifying, tracking, normalizing, and analyzing company-wide sustainability, safety, and social responsibility-related metrics. Our web-architected, relational database-based solutions serve as the backbone of organizational EH&S goals and objectives (G&O) tracking, Annual EHS Report, Company Sustainability Reports, Company Social Responsibility Reports, and more.

BENEFITS

Streamlined Corporate Program Management: Allows corporate EH&S teams to tie together all facets of enterprise metrics reporting, tracking, and analysis. The solution allows creation and management of business unit/division specific metrics.

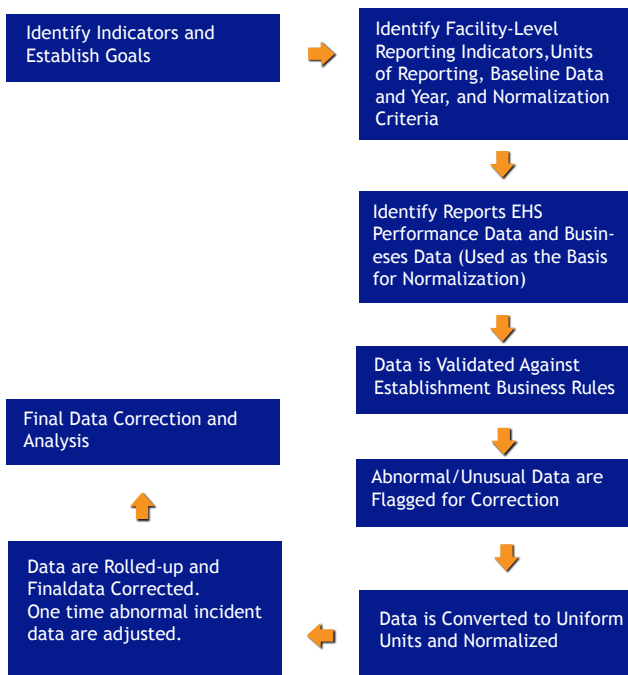

Increase Accuracy: By allowing automated unit conversions and derivative data calculations (e.g., CO2 equivalent data based upon energy data, etc.), the solution enhances accuracy and corporate confidence for 3rd party auditing.

Support for Global Sites: The multilingual functionality enhances the usability.

Transparency and Visibility: The platform allows transparency in data and instantaneous visibility as to performance against goals and targets.

Enable Benchmarking: The solution facilitates comparison between facilities, divisions and various operating units to take business decisions to improve operational efficiency.

Eliminate Lag Time in Corporate Reporting: Since data is reported and stored centrally, corporate EHS rollup reports can be generated at any time.

ProcessMAP Solution is Based Upon Logical EH&S Metrics Reporting and Management Processes Used by Some of the Leading Global Corporations.
