

POWERED INDUSTRIAL TRUCK INSPECTION (DIESEL, LPG & GAS)

Easily Assess the Operational Safety of Forklifts Prior to Use

ProcessMAP's Powered Industrial Truck Inspection (Diesel, LPG, & Gas) app helps to ensure pre-operation and operational inspections are conducted by forklift operators. These inspections are critical in ensuring forklifts operate safely and equipment is placed out of service when deficiencies are discovered.

The app provides a configurable checklist allowing operators to easily assess the condition of the forklift and immediately notify operators when a vehicle should be placed out of service due to a deficiency. In addition, the app provides the ability to quickly retrieve and review inspection records.

Key Features

Configurable - Modify to Fit Specific Business Needs

Mobile Online and Offline Capabilities

Ability to Customize Notifications

Export Records in Excel and PDF Format

Key Benefits

Easily conduct pre-operation and operational inspections of diesel, LPG, and gas forklifts using a configurable, built-in checklist

Quickly be alerted when deficiencies require a forklift to be put out of service

Ensure forklifts are examined at least daily before being placed in service

Easily retrieve and review inspection records using the configurable list screen
