Forward-thinking organizations are realizing that Sustainability performance indicators are analogous to financial performance indicators—both provide measurable, and true health of the corporation. Company-wide sustainability metrics are major components for accurate sustainability and corporate responsibility reporting. Without an integrated database platform, facilities typically report data in spreadsheets or disparate systems in various formats. Data validation, normalization and aggregation processes are becoming an increasingly time-consuming task.

For multinational organizations, lack of reporting in consistent units (e.g., Tons vs. Kilograms) adds additional manual data conversion steps. In summary, without a common platform for corporate and facility EH&S / Sustainability Management teams, Sustainability Reporting could become an extremely inefficient and error-prone process.

ProcessMAP’s Sustainability Performance Management solution is the most comprehensive platform, designed to allow organizations to establish a 360 degree performance management system to streamline every aspect of collecting, verifying, tracking, normalizing, and analyzing company-wide sustainability, safety, and social responsibility-related metrics. Our cloud-based solutions serve as the backbone of organizational Sustainability Goals and Objectives (G&O) tracking, Annual EHS Report, Company Sustainability Reports, Company Social Responsibility Reports, and more.

**KEY BENEFITS:**

- Establishes enterprise-wide consistency in data collection & management
- Allows real-time tracking of sustainability performance
- Enhances data quality & audibility
- Manage corporate and site specific projects to achieve corporate missions and goals
- Enhanced visibility as to performance against goals and targets
- Enables benchmarking for better business decisions to improve operational efficiency
- Insightful analytics and reports that enables informed decision making
Organization & Location Setup
- Setup Multiple Organization types like Company, Locations, Warehouses, Sales Offices, Departments, Regions, and Business Units.
- Easy Reorganization from Acquisitions and Divestitures

Program Management
- Setup Multiple Programs for Multiple Years
- Selection of Locations & Sources
- Set Baseline Years by Location
- Setup Reporting Frequencies
- Setup Data Sources (Manual Entry or Automated)
- Setup Goals & Reduction Targets
- Setup Emission preferences
- Setup Validation Rules
- Configuration of Internal / External Verification Workflow
- Capture & Track Action Items
- Setup Event-Based E-mail Notifications
- Upload Documents and Pictures

Data Collection & Reporting
- Health & Safety Management
- Energy & Carbon Management
- Waste Management
- Water Management
- ODS/GHG Management
- Storage Tank Management
- Management of Asbestos Containing Materials
- Regulatory Certifications Management

Vendor Setup & Reporting
- Setup Vendor Reporting Forms
- Vendor Creation & Management
- Integration with Vendor System
- Vendor Benchmarking & Ranking

Indicator Library
- 1,600+ Preloaded Key Performance Indicators (KPIs)
- Predefined Library of Indicators Based on GRI Standards
- Custom Indicator & Unit of Measurement Setup
- Setup Normalization Factors
- Formula Builder for Configuring Normalized KPI's

GRI Certified Software and Tools Program
- Reporting Capability in Grand New GRI Standards
- Robust and Transparent Reporting
- Facilitates Easier Data Collection
- Generates Standard and Custom Report Formats
- Establishes Greater Data Integrity

Reports & Analytics
- Raw & Normalized Consumption Emissions Data Reports & Charts
- Rolled up Reports at Site & Each Organizational Levels
- Baseline Year Comparison Reports & Charts
- CDP, DJSI, & GHG Protocol related reports
- No Activity & Data Variance Reports Configuration
- Ad Hoc Report Generation & Subscription
- Data Export Options (Excel, PDF, CSV, & XML)

Data Import Tool & Integrations
- Import Data Utility Tool for KPI Data Loading (Excel, CSV, & XML)
- Single Sign-On (SSO) Integration with Corporate Networks
- Integration with In-House/External Energy Management Systems
- Integration with Energy Billing Consolidators
- Integration with Building Management Systems
- Integration with In-House/External HR Management Systems
- Integration with Waste Management Systems

User Management & Security
- Setup Users (Manual & Automated)
- Setup Roles & Assign Permissions
- Assignment of Permissions (Manual & Automated)

See what our cloud-based Sustainability Performance Management solution can do for you!
