

JOB SAFETY ANALYSIS

Job Safety Analyses (JSA) not only help to reduce the potential for injuries by following a systematic approach to identifying and mitigating hazardous conditions associated with a job, but also increase production efficiency, improve communication, aid in employee training, and meet safety requirements.

Analyze Jobs and Mitigate Hazardous Conditions

ProcessMAP's JSA app enables users to mitigate potential hazards in the workplace by breaking down jobs into smaller tasks/activities, identifying hazardous conditions, and making recommendations for the safest way to do a job. The app also allows users to assign and manage preventive and corrective actions to ensure appropriate controls are put in place.

Key Features

Configurable - Modify to Fit Specific Business Needs

Mobile Online and Offline Capabilities

Ability to Customize Notifications

Export Records in Excel and PDF Format

Create and Assign Action Items

Key Benefits

Evaluate jobs to improve both safety and efficiency

Easily break down jobs into individual tasks improving the ability to identify risks and mitigate hazards

Effectively communicate the proper, risk-free steps to complete each job

Assign and Track action items to closure
